(54) Title: STABLE LIPOSOMES OR MICELLES COMPRISING A SPHINOLIPID AND A PEG-LIPOPOLYMER

(57) Abstract: The present invention concerns a stable lipid assembly comprising a biologically active lipid having a hydrophobic region and a polar headgroup, wherein the atomic mass ratio between the headgroup and hydrophobic region is at least 1.5 and optionally a lipid matrix composed of liposome forming lipids. Specific lipid assemblies of the invention comprise the biologically active lipid, ceramide, a lipid derivatized with polyethylene glycol (lipopolymer) and optionally in combination with a phospholipid (e.g. Egg phosphatidylcholine (EPC) and hydrogenated soybean phosphatidyl-choline (HSPC)). The lipid assemblies of the invention exhibited a therapeutic effect in vitro in tumor cells as well as in vivo in and optionally in combination with a phospholipid (e.g. Egg phosphatidylcholine (EPC) and hydrogenated soybean phosphatidylcholine (HSPC)). The lipid assemblies of the invention exhibited a therapeutic effect in vitro in tumor cells as well as in vivo in animal models and they deliver the biologically active lipid to the disease site.

INTERNATIONAL SEARCH REPORT

nternational application No. PCT/IL2004/000294

Box II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)
This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1. X Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:
Although claims 54-80 are directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.
2. X Claims Nos.: 1-80 (in part) because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
see FURTHER INFORMATION sheet PCT/ISA/210
3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)
This International Searching Authority found multiple inventions in this international application, as follows:
1. As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark on Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box II.1

Although claims 54-80 are directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.

Continuation of Box II.1

Rule 39.1(iv) PCT - Method for treatment of the human or animal body by therapy

Continuation of Box II.2

Claims Nos.: 1-80 (in part)

Present independent claim 1 relates to an extremely large number of possible "lipid assemblies", namely any combination comprising a "biologically active lipid" and a "lipopolymer", both components being defined only in terms of a parameter, namely the "atomic mass ratio between the headgroup and the hydrophobic region". Claims 2, 3 and 4 contain further parametric definitions ("additive packing parameter" and "level of water tightly bound to said lipopolymer headgroup"). The claims cover all possible combinations of a "biologically active lipid" and a "lipopolymer" having these characteristics or properties, whereas the application provides support within the meaning of Article 6 PCT and/or disclosure within the meaning of Article 5 PCT for only a limited number of such combinations, namely liposomes or micelles comprising: 1) a sphingolipid ("biologically active lipid"), 2) a pegylated lipid ("lipopolymer"), and 3) a phospholipid, in the sense of claims 1, 5, 11, 14, 21 and 22 taken in combination, and as interpreted in connection with the description and the examples. The application only provides disclosure and/or support for the combination of components 1), 2) and 3) as defined above. The area covered by claim 1 is broader than justified by the extent of the disclosure. In the present case, claim 1 so lacks support, and the application so lacks disclosure, that a meaningful search over the whole of the claimed scope is impossible. It is the same for independent claims 26 and 54.

Furthermore, the use of the aforementioned parametric definitions in the present context is considered to lead to a lack of clarity within the meaning of Article 6 PCT. It is impossible to compare the parameters the applicant has chosen to employ with what is set out in the prior art.

Consequently, the search has been carried out for those parts of the claims which appear to be supported and disclosed, namely those parts relating to the subject-matter as defined above.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

The applicant's attention is drawn to the fact that claims relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure. If the application proceeds into the regional phase before the EPO, the applicant is reminded that a search may be carried out during examination before the EPO (see EPO Guideline C-VI, 8.5), should the problems which led to the Article 17(2) declaration be overcome.
